

Floor mounting using leveling feet

FLOOR MOUNTING

The leveling feet kit is required for floor mounting. The drain hose/pipe must continuously slope downward toward the drain. Use solid supports as needed to elevate the unit enough to allow for continuous drain slope. Use the adjustable feet to level the unit right to left and front to back so that unit drains properly.

1. Insert nut into the bracket on the dehumidifier.
2. Thread leveling foot into nut to desired height.
3. Lock into place by tightening jam nut.
