* For wire sizing, the highest leg draw is shown due to current imbalance.
 ** No available SDU option for these models.

Notes:

- SDU-I is available for Models HT-2 through HT-10.
- SDU-E is available for all models, except Model HT-2 and Models HT-16 through HT-34.
- Models with the SDU option have additional electronic components in the Humidi-tech cabinet. If adding an SDU, add the following to the Humidi-tech shipping and operating weights:
 SDU-E: 5.5 kg
 SDU-I: 4.0 kg
- All Humidi-tech humidifiers operate at 50/60 Hz.
- SDUs ship separate from the Humidi-tech.

Table 1-1: SDU specifications						
SDU model	Maximum capacity	Shipping weight	Amps at 120V (50/60 Hz)	Horse-power	m³/s	dB*
SDU-I	13.6 kg/h	31 kg	3.20	1/5	0.36	58
SDU-E	46.3 kg/h	28 kg	2.07	1/8	0.26	64

* Measurement taken 2 m in front of SDU cabinet.

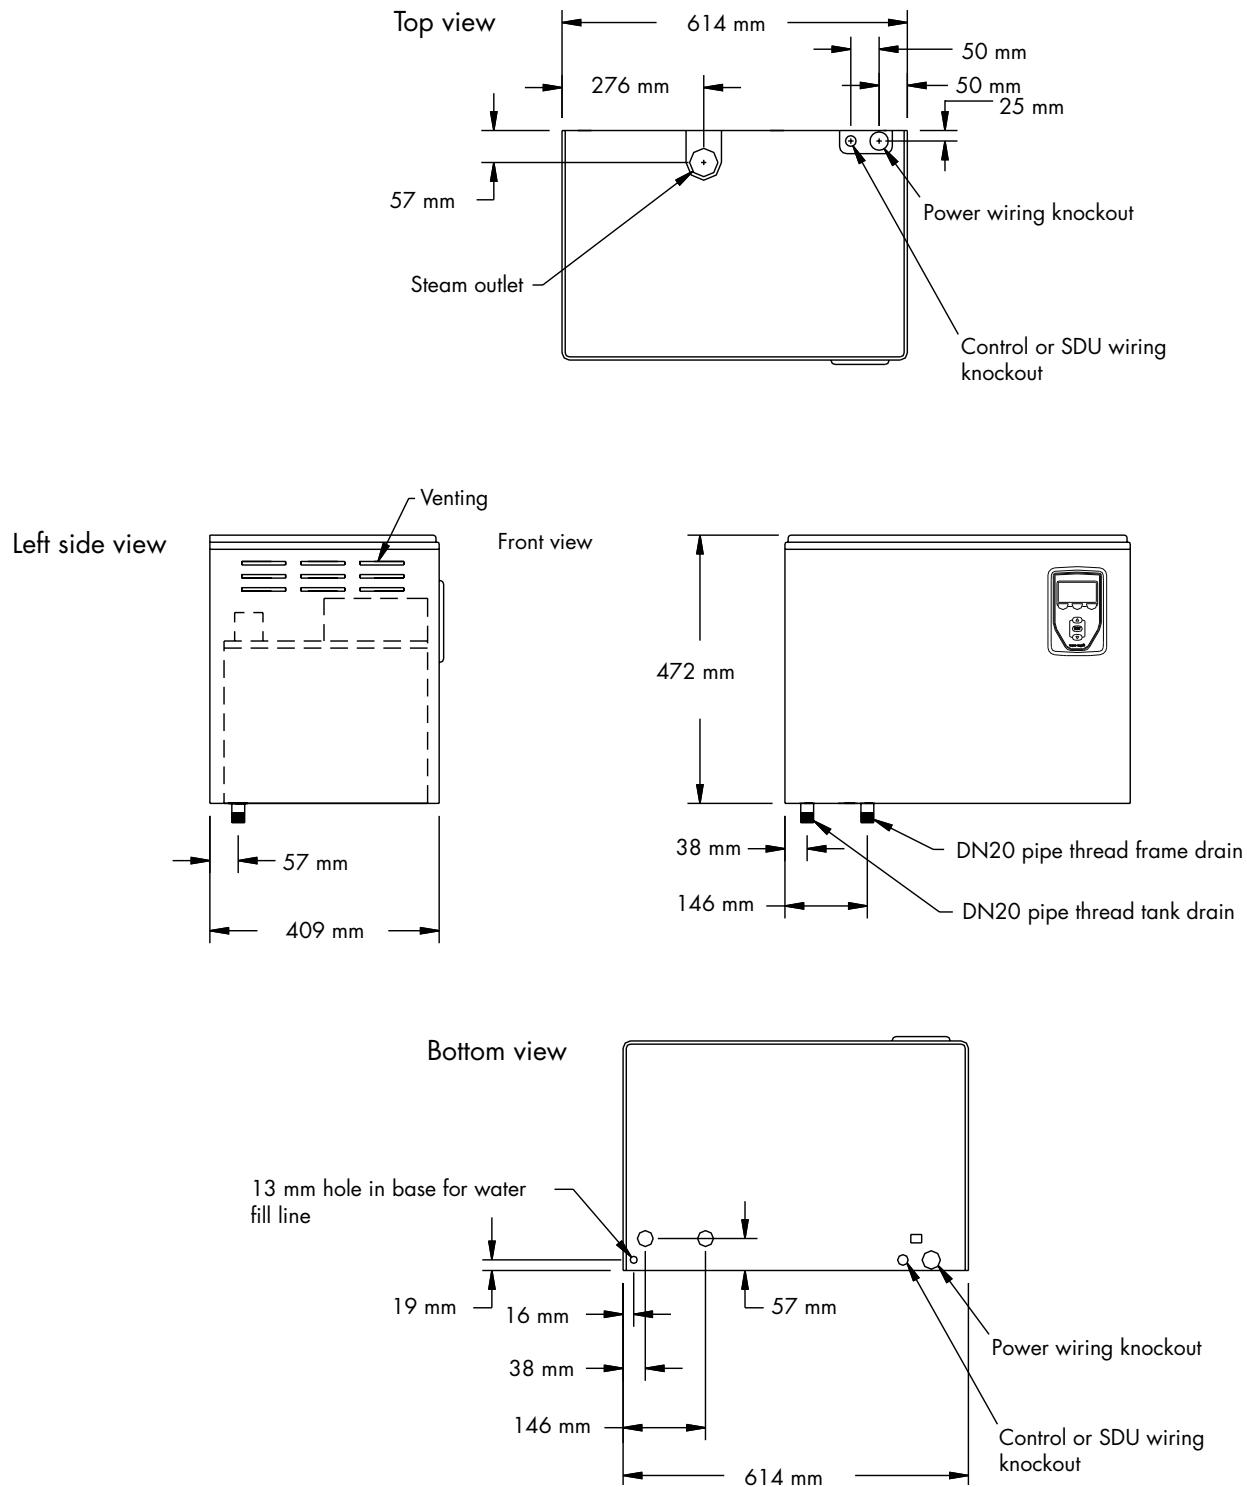

SDU-I is available for Humidi-tech humidifier models VM-2 through VM-8, and all VM-10 models except those using 240V, three-phase power with SSR control.

SDU-E is available for all Humidi-tech humidifiers except VM-2 and models using 240V, 277V, and 480V three-phase power with the SSR control option and drawing more than 21.7 amps.

SDUs ship separate from the Humidi-tech humidifier.

INSTALLING SPACE DISTRIBUTION UNITS (SDUS)

Provide at least 150 mm clearance on each side of the SDU.

Field wiring is required to connect the SDU fan and airflow proving switch terminals to Humidi-tech electrical panel terminals. Refer to the external connections diagram in the package shipped with your unit.

Important: Maximum ambient RH must not exceed 45% for the SDU-I to operate properly.

WHEN PERFORMING HUMIDI-TECH MAINTENANCE

If the SDU-E or SDU-I is installed immediately above the Humidi-tech, disconnect both hose clamps on the steam hose, grip the hose and rotate it to break it loose from the tubing, and then slide the hose up onto the SDU steam tube until sufficient clearance is provided to move the tank.

Note: SDU-E dispersion box requires an installed condensate drain line and water seal, provided by installer.

Humidi-tech humidifier: Dispersion

As steam is discharged from the SDU-E, it quickly cools and turns to a visible fog that is lighter than air. As this fog is carried away from the SDU-E by the airstream, it tends to rise toward the ceiling. If this fog contacts solid surfaces (columns, beams, ceiling, pipes, etc.) before it disappears, it could collect and drip as water. The greater the space relative humidity, the more the fog will rise, throw and spread.

Table 4-1 lists the minimum rise, throw and spread non-wetting distances for SDU-E at 40%, 50% and 60% RH in the space. Surfaces cooler than ambient temperature, or objects located within this minimum dimension, can cause condensation and dripping. To avoid steam impingement on surrounding areas, observe the minimum non-wetting distances in Table 4-1.

The SDU-E contains a blower (120 V, single-phase, 60 Hz) and an airflow proving switch (field-wired to the humidifier electrical panel). A wiring diagram of the SDU-E is included with the unit.

On a call for humidity, the humidifier begins producing steam, and the start relay energizes the SDU-E blower. When the call for humidity is satisfied, the Vapor-logic controller keeps the blower running to disperse residual moisture using a time delay.

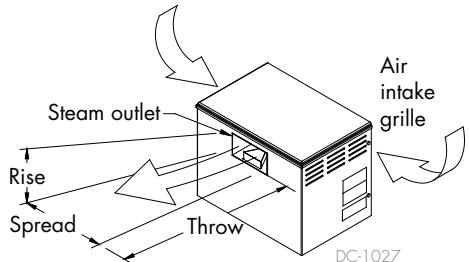

Table 4-1:

Notes:

- Surfaces or objects directly in the path of vapor discharge may cause condensation and dripping.
- To avoid steam impingement on surrounding areas, observe the minimum nonwetting dimensions in this table.
- Rise: The minimum nonwetting height above the steam outlet of the SDU-E.
- Spread: The minimum nonwetting width from the steam outlet of the SDU-E.
- Throw: The minimum nonwetting horizontal distance from the steam outlet of the SDU-E.

Table 5-1:

Maximum steam carrying capacity and length of interconnecting steam hose or tubing

Steam hose ¹						Copper or stainless steel tubing					
Hose I.D.		Maximum capacity		Maximum length ²		Tubing size		Maximum capacity ³		Maximum developed length ⁴	
inches	DN	lbs/hr	kg/h	ft	m	inches	DN	lbs/hr	kg/h	ft	m
1½	40	150	68	10	3	1½	40	150	68	20	6.1
2	50	250	113	10	3	2	50	220	100	30	9.2

1. When using steam hose, use DriSteem steam hose for best results. Field-supplied hose may have shorter life and may cause foaming in the evaporating chamber resulting in condensate discharge at the dispersion assembly. Do not use steam hose for outdoor applications.
 2. Maximum recommended length for steam hose is 10' (3 m). Longer distances can cause kinking or low spots.

3. Insulate tubing to minimize loss of capacity and efficiency.
 4. Developed length of tubing equals measured length plus 50% of measured length, to account for fittings.
 Longer tubing lengths are possible at capacities lower than listed maximums. Consult factory.

Note: Capacities and lengths in this table are based on total maximum pressure drop in hose or tubing of 5" wc (1250 Pa)

Table 5-2:

Steam loss of interconnecting steam hose or tubing

Description	Nominal hose or tubing size		Steam loss				Insulation thickness	
			Noninsulated		Insulated
